## with Quick Heal Internet Security Essentials

Key Features

Browsing Protection

Safe Banking

Ransomware Protection

Wi-Fi Scanner

Key Benefits

- Complete Web Protection
- Lightweight on Computer
- Real-time Virus Protection
- Well Organized Features
- Best-in-class Support

Product Highlights

Surf the Internet safely

Browsing Protection

- Blocks suspicious and harmful websites that can download malwares and worms to your PC or steal your data.

Phishing Protection

- Detects frivolous and phishing attempts instantly that try to steal your data in disguise. You never fall prey to data phishing.

Pay bills, transfer money online, and do banking without fear

Safe Banking

- Protects your credentials including bank account, username, and password during banking transactions and online shopping from getting stolen.

Anti-Keylogger

- Blocks all keystrokes spyware that can record your data and send to the hackers.

Secure email communications

Email Protection

- Prevents malwares coming through emails.

Spam Protection

- Blocks spam emails and malware infected attachments.

Prevent ransomware attempts

Ransomware Protection

- Takes a backup of your data on regular basis, so if there is any ransomware attack, you can remove ransomware and restore your data without getting affected.

Dodge the screen locker malware

Screen Locker Protection

- Dodges malwares that lock the screen preventing access to your computer rendering it useless. Create a short-cut key combination to initiate a clean-up of your computer and remove the malicious programs bypassing such attempts.

Stay protected with robust scan engine

Virus Protection

- Blocks virus infections that try to infect computer programs to gain admin control and steal your data.

Malware Protection

- Detects all kinds of malware, viruses, worms, Trojans, and spyware that try to infect your PC from various sources and removes them instantly.

Advance DNAScan

- Keeps an eye on all the running programs on your PC to trace any suspicious behavior. DNAScan, our indigenous and proven detection mechanism, detects new and unknown malicious threats based on behavioral classification of the documents and files.
