- » Secures your financial transactions when you use payment apps.
 - » Recovers your device in case of loss or theft.
 - » Blocks unwanted national and international numbers.*
 - » Scales device security by triggering motion and light alarm.
-

Feature List

The best mobile security suite protects your mobile device using Anti-Theft feature and easy-to-use virus protection. This results in improved device performance, so you spend less on mobile maintenance.

Scan Device

This flexible feature offers the following functionalities:

- » **Quick Scan** - This is an on-demand scan that starts scanning your mobile device at your request.
- » **Full Scan** - Thoroughly scans your device and memory card.
- » **Vulnerability Scan** - Certain mobile apps installed on your phone might have security vulnerabilities which hackers can take advantage of. This feature detects such vulnerabilities and brings them to your notice.
- » **Scan Memory Card** - Scans only the memory card.

» **Schedule Scan**

This option allows you to schedule a virus scan at a time that is convenient for you. It offers:

● **Scan Types to Schedule**

- Full Scan
- Scan Memory Card

● **Scan Frequency**

- **Scan while charging** - Scans your mobile device while it is being charged. For the scan to begin, your device battery must be 50% or more and the scan occurs once every 24 hours.
- **Once a day** - You can choose the time for the scan to begin.
- **Once a week** - You can choose the day and the time for the scan.
- **Once a month** - You can choose the date and the time for the scan.

» **Security Advisor**

The Security Advisor guides you about the settings that affect the overall security of your Smartphone and redirects you to the respective screen to change the settings.

Different Security Advisor settings are:

- Accounts and Sync
- Bluetooth
- Device Memory Encryption

- Hotspot and Tethering
- Quick Heal Anti-theft
- Quick Heal Background Scan
- Screen Lock
- Unknown App Sources
- USB Debugging
- Wi-Fi

» **Privacy Advisor**

Privacy Advisor notifies about the apps that could affect your privacy. It also helps you review the permissions used by these apps, and you can decide whether you want to keep the apps or not. The feature monitors apps with permissions such as:

- Access to Accounts
- Access to Contacts
- Read Identity Info
- Tracking Location
- Access to Messages
- Access to Network

» **Browsing and Phishing Protection**

Blocks infected, malicious, fraudulent, and phishing websites.

SafePe

Secures your financial transactions when you use payment apps for online shopping, banking, paying bills, etc. The feature checks the device environment for threats like malware or unknown vulnerabilities before you use any payment app. It checks for threats by scanning device root/access, integrity, environment, file system, and network.

Boost

Boost improves device performance by killing running apps at fixed schedule and even when the screen is locked.

» Network Monitor

- You can manage the networks that are in use on your device. You can check the current usage of all the networks and control the usage.
- Network Usage Summary gives you a report of the data usage by various apps on your device. It also allows to set the data usage limit on Mobile Network and Wi-Fi Network.
 - Helps set data usage of mobile network and/or Wi-Fi networks in use. Allows setting maximum data usage limit within these networks.
 - Alerts the user if data usage reaches a specified limit.
 - Stops network once the data usage reaches the maximum limit.

Block calls*

The Set Privacy feature allows you to protect your privacy with the following functionalities:

» Call Filter

Easily block incoming calls from unknown or unwanted numbers. And now, you can also use this feature to block all numbers belonging to a particular series. For instance, if you block the series '8007', all phone numbers beginning with this series will be blocked from reaching you.

» International Call Block

With Quick Heal Total Security, you can now also block unknown International calls.

» Parental Control

The Parental Control feature helps you block malicious and potentially dangerous websites. The feature allows you to:

- Block websites based on their categories such as adult, crime & violence, gambling, social networks, illegal software, etc.
- Block URLs of specific websites.
- To provide Web Security, Quick Heal Total Security provides multi-browser support on your phone. It supports the default mobile browser, Chrome, Firefox, Maxthon, Opera, and Dolphin.

You can also exclude certain websites from getting blocked even if their category is in the blocked list.

Intruder Detection

If someone enters a wrong password 2 times consecutively (for the device's lock screen or Quick Heal anti-theft block screen), this feature will take snapshots using the front and rear camera.

On Install App Scan

Scans newly installed apps on the device to detect and prevent threats.

Wi-Fi Scan

Scans your mobile device and alerts you whenever it detects an unsecured Wi-Fi network. Connecting to such networks can let attackers steal your sensitive information like login ID and passwords, banking details, and other personal information.

Fingerprint Unlock

If your device supports Fingerprint sensor, you can use your fingerprint to access features such as Anti-theft, Privacy Protection, and Web Security.

Message Center

Displays important notifications which require your attention. The Message Center also displays the latest news, updates, and important alerts from Quick Heal lab.

Keylogger Notification

Detects and removes the keylogger software that records your keyboard strokes and can be used as a phishing application. With keylogger notification, you can easily take action on the suspicious application.

Background Scan

Provides automatic real-time virus and spyware scans with optional manual scan.

- Ensures automatic protection from all kinds of malware threats.
- If you have to use another memory card, the anti-virus engine scans the memory card before transferring any data.
- Allows you to use your mobile device while the scan runs in the background.
- Can be configured to exclude applications from scanning.
- Can be configured to exclude folders from scanning.

Activity

Get in-depth reports on all the activities carried out by Quick Heal Total Security on your Android device. These include reports on:

- Virus detections
- Blocked calls
- Activities related to anti-theft
- Any sites that were blocked
- Updates taken for virus definitions, etc.

Anti-Theft

Quick Heal's anti-theft technology prevents your device from being misused. It allows you to lock your device or erase its entire data remotely, if it gets lost or stolen. The technology offers the following layers of advanced protection to your Android:

- » **Remote Locking**
Blocks usage of your phone if it is lost or stolen.
- » **Mobile Tracking**
Helps in locating your lost or stolen device.
- » **SIM Change Notification***
If the SIM is changed, the new number will send an SMS to the owner's alternate mobile number informing about the SIM change.

- » **Block phone on SIM card change***

If the SIM card of your Smartphone is changed after it is stolen, the security suite blocks usage of the mobile phone.

- » **Remote Data Wipe**

Helps you delete the data on your phone remotely.

- » **Auto Dial**

Allows you to discreetly receive a call from your device and hear surrounding sound in case of loss or theft.

- » **Auto Receive Call**

Allows you to discreetly make a call to your device and hear surrounding sound in case of loss or theft.

- » **Image Capture**

Allows you to take an image from the front and rear camera of your device.

- » **Audio Recording**

Allows you to record the surrounding sound around your device.

- » **Video Recording**

Allows you to record the surrounding video around your device.

Anti-Theft Alarm

Anti-Theft alarm is a unique feature that works on motion and light sensors and helps to avoid any device theft or pickpocket.

» **Motion alarm**

It notifies user instantly if the phone is moved from its current position, alerting about the possibility of a theft.

» **Pocket alarm**

Ensures pocket theft protection by instantly notifying user, if someone attempts to steal phone from the pocket.

Security Shield

The Security Shield displays the security level of your device and data through a graphical representation. By tapping this shield, you can configure the security settings of your device.

- The orange circle indicates the current level of security on your device.
- The check mark inside indicates that your device is in a completely secured state. An exclamation mark would indicate that your device is unsecured.

Regular Automated Virus Updates

Quick Heal Total Security for Android receives regular automated security updates. This helps protect your device and data from new and emerging threats.

Trusted SIMs List*

The Trusted SIMs List feature allows you to make a list of SIM cards that you trust and are aware of. Using any of the SIMs mentioned in this list will prevent your device from getting blocked. Fifty (50) SIM numbers can be added to the Trusted SIMs List.

Scan Before Download

Automatically scans apps even before you download them from the Google Play Store. It also informs you whether an app is safe to install or not. If it's not, the feature displays the risks of installing the app.

Remote Device Management

This feature helps you manage your lost or stolen device via Quick Heal's Remote Device Management Portal. From this portal, you can perform the following actions:

- Remotely lock, unlock, and erase data from your phone.
- Track your phone's location.
- Configure Parental Control.

Quick Settings Notification

Make use of an easy shortcut to change the following settings on your device:

- Wi-Fi
- Bluetooth
- Mobile Data
- Brightness
- Torch

News

The News feature provides you with the latest news and alerts from Quick Heal Labs. News about computer and mobile protection, and other noteworthy events are displayed here.

Web Security

Excellent browsing and phishing protection by blocking malicious websites.

It protects your device from all the infected websites when you connect to the Internet and keeps you safe from any kind of malware and websites that try to steal your valuable data such as bank details, user credentials, social security information, and passwords.

*** This feature will not work on android 10 and above OS**
