

Guardian Total Security

The ultimate security from all types of cyberattacks

Powerful. Fast. Multilayered.

Comprehensive Protection

- Our robust scan engine provides security against known and unknown malware, phishing, and virus attacks in real time.
- Blocks malware download on your PC.
- Ensures that you browse the Internet securely.
- Ever vigilant, Guardian Total Security protects your data against known and emerging ransomware attacks.

Lightweight Footprint

Lightweight yet powerful antivirus uses minimal system resources and lets you enjoy the full power of your PC.

Ease of Use

Simple interface and optimum default security settings ensure minimal user intervention. Just install and register the product, and enjoy your secure digital world.

Best-in-class support

Faster solution to customer's queries, FAQ, and other support facilities.

Highlights

Surf the online world safely

Browsing Protection

- Blocks suspicious and harmful websites that can download malware and worms to your PC or steal your data.

Phishing Protection

- Prevents all kinds of phishing attempts that try to steal your data. Fraudsters impersonate legitimate email notifications asking for login or banking credentials. This feature detects such attempts.

Prevent Ransomware attacks

Total Ransomware Protection

- Keeps your data and PC safe from ransomware attacks.
- Smart data backup and restore features act as a safety net to get your valuable data (including Tally accounting data) back in case of a ransomware attack.

Do banking & online shopping confidently

Safe Banking

- Protects your credentials including bank account, username, and password during banking transactions and online shopping from getting stolen.

Anti-Keylogger

- Blocks all keystrokes spyware that can record your data and send to the hackers.

Prevent data breaches

Data Theft Protection

- Blocks unauthorized copying of data from your PC to any USB drive.

Proven scan engine

Virus Protection

- Blocks virus infections that try to infect computer programs to gain admin control and steal data.

Malware Protection

- Detects all kinds of malware, viruses, worms, Trojans, and spyware that try to inflict your PC from various sources and removes them instantly.

Advance DNAScan

- Keeps an eye on all the running programs on your PC to trace any suspicious behavior. DNAScan, our indigenous and proven detection mechanism, detects new and unknown malicious threats based on behavioral classification of the documents and files.

Behavior-based Detection

- Monitors all running applications for their behavior, whether the applications perform the normal behavior and execute authorized actions. For example, if an application changes the system settings, Behavior-based Detection will block such malicious activities.

Secure email communications

Email Protection

- Prevents all kinds of malware coming through emails.

No fear of intrusion attack

Firewall

- Protects your PC from network attacks.

IDS/IPS

- Blocks all kinds of malware intrusion and hacking attempts. Detects and blocks Remote Desktop (RDP) brute-force attempts and IP of remote attackers.

Anti-Trojan

Trojans are malicious software programs that come in disguise to trick you to download and install them on your computer. Attackers using Trojans can steal data, download more malware, destroy data, and take control of your computer. Anti-Trojan blocks such programs from getting inside your computer.

Anti-Spyware

Spyware is a malicious software that secretly monitors unsuspecting users and steals their data. Spyware tries to steal crucial information such as login credentials from the infected computer. Anti-Spyware protects your computer from such data-stealing malware.

Virtual Keyboard

Helps you to enter the required information without pressing any keys on the physical keyboard. It reduces the risk of spying your information by hackers.

Adware Protection

Blocks adware from getting installed on your computer. Adware is a software program designed to display ads on your computer. Although not necessarily harmful, adware can expose your computer to threats.

Rogueware Protection

Also known as scareware, rogueware is a program designed to frighten you with fake warnings of virus detection and trick you into purchasing and downloading fake antivirus software. Rogueware can be malware, adware, spyware or a Trojan. Rogueware Protection blocks such malicious software from getting installed on your computer.

USB Drive Protection

When you attach a USB drive to your computer, and run Secure Removable Drive, your USB drive becomes secure from autorun malware. If you connect the vaccinated drive to any computer, the drive will not execute autorun malware. Hence, malware cannot spread from such drives to your computer and vice versa.

Automatic Update (Internet)

We release new updates to fight against the latest threats regularly. You can set to take the updates automatically whenever they are available. It is recommended that you always keep the Automatic Update feature turned on.

System Requirements

Operating System Microsoft Windows XP (SP2) or later	RAM 2 GB or more
CPU Intel Pentium 4 or higher	Disk Space 1.2 GB
Browser Internet Explorer 6 or higher	Additional requirements Internet connection to receive updates and for activation.

Please visit our website www.guardianav.co.in to know more about our security products and related system requirements.

Auto Silent Mode

Stops notifications or pop-ups from Guardian Total Security while antivirus runs in the background. Any scheduled scan is also deferred to the next schedule until Auto Silent Mode is turned off. This allows you to run any application in full screen mode like when you watch a movie or play games.
