

Enjoy secure digital experience with **Quick Heal Total Security Multi-Device (Windows)**

Why Quick Heal Total Security?

All round protection, lightweight, incredible ease of use, and best-in-class support

Comprehensive Protection

- Our robust scan engine provides security against known and unknown malwares, phishing, and virus attacks in real time.
- Ensures that you browse the Internet securely and blocks malware download on your PC.
- Ever vigilant, Quick Heal Total Security protects your data against known and emerging ransomware attacks.
- Highly secure File Vault encrypts and secures your files and folders.
- Protects your kids from online threats and unwanted content.

Lightweight Footprint

Lightweight, yet powerful antivirus that uses minimal system resources and lets you enjoy the full power of your PC.

Ease of Use

Simple interface and optimum default security settings ensure minimal user intervention. Just install and register the product, and enjoy your secure digital world.

Best-in-class support

Toll free number, online support, and a knowledge base information platform for all your queries.

Highlights

Firewall Protection (2- Way Protection)

- Firewall Protection ensures 2-way protection and scans both incoming and outgoing Internet communication.

Full Scan

- Quick Heal Total Security offers a couple of scan options. You can scan on demand, schedule scans, or scan certain files and folders. Full Scan initiates a complete scan of all boot records, drives, folders, files, and vulnerabilities on your computer. Once Full Scan is done, only new files are scanned in future and thus it optimizes scanning requirement.

Boot Scan

- Cleans even highly infected systems. Some viruses tend to be active if the system is running and they cannot be cleaned. Boot Time Scan starts scanning on next boot using Windows NT Boot Shell to clean stringent viruses.

Screen Locker Protection

- Dodges malwares that lock the screen preventing access to your computer rendering it useless. You can create a short-cut key combination to initiate a clean-up of your computer and remove malicious programs bypassing such attempts.

Emergency Disk

- Sometimes rootkits reappear even after anti-rootkit scanning. Hence, you can use Quick Heal Emergency Disk for complete cleaning.

Browser Protection

- Browser Protection ensures that malwares embedded in browsers do not access folders on your computer.

Hijack Restore

- Helps you restore the default settings of Internet Explorer modified by malwares, spywares, or even by you.

USB Drive Protection

- Stops autorun malware of the USB drive to curb spread of malware to your system.

Wi-Fi Scanner

- Internet data travels via routers. Routers are subject to various vulnerabilities such as DNS hijacking, weak password, or weak Wi-Fi encryption. In such cases, communication over your router may be intercepted or hijacked. Wi-Fi Scanner scans your Wi-Fi router for possible vulnerabilities and recommends security measures.

Game Booster

- Game Booster allows you to enjoy playing games on PC smoothly and faster without any interruptions from other applications.

Ultimate Security

Surf the online world safely

Browsing Protection

- Blocks suspicious and harmful websites that can download malwares and worms to your PC or steal your data.

Phishing Protection

- Prevents all kinds of phishing attempts that try to steal your data. Fraudsters impersonate legitimate email notifications asking for login or banking credentials. This feature detects such attempts.

Prevent ransomware attacks

Ransomware Protection

- Keeps your data and PC safe from ransom and hijack attempts.
- Smart data backup and restore features act as a safety net to get your valuable data back in case of a ransomware attack.

Safe family, happy family

Parental Control

- Makes Internet a healthy platform for your children. Regulates your children's access to the Internet and blocks unwanted websites and apps to protect them from offensive content and online threats. Their safety is in your own hands.

Do banking & online shopping confidently

Safe Banking

- Protects your credentials including bank account, username, and password during banking transactions and online shopping from getting stolen.

Anti-Keylogger

- Blocks all keystrokes spyware that can record your data and send to the hackers.

Secure confidential data & prevent data breaches

File Vault

- Allows you to create a password-protected virtual drive on your PC to secure your valuable data. Your data is stored in an encrypted format to prevent unauthorized access.

Data Theft Protection

- Blocks unauthorized copying of data from your PC to any USB drive or vice versa.

Secure email communications

Email Protection

- Prevents malwares coming through emails.

Spam Protection

- Blocks spam emails and malware infected attachments.

Robust scan engine

Virus Protection

- Blocks virus infections that try to infect computer programs to gain admin control and steal data.

Malware Protection

- Detects all kinds of malware, viruses, worms, Trojans, and spyware that try to inflict your PC from various sources and removes them instantly.

Advance DNAScan

- Keeps an eye on all the running programs on your PC to trace any suspicious behavior. DNAScan, our indigenous and proven detection mechanism, detects new and unknown malicious threats based on behavioral classification of the documents and files.

Protect your privacy

Anti-Tracker

- When you go online, there are trackers that pry on your online footprint and browsing behavior. Trackers use such data to promote marketing or sales, display ads, share or sell personal information to different companies without your knowledge. Anti-Tracker protects your privacy by blocking the trackers that collect your footprints whenever you browse online.

Webcam Protection

- Detects and prevents applications and malwares from accessing the webcam of your PC without your consent to compromise your privacy.

No fear of intrusion attack

Firewall

- Protects against network attacks.

IDS/IPS

- Blocks all kinds of malware intrusion and hacking attempts. Detects and blocks Remote Desktop (RDP) brute-force attempts and IP of remote attackers.

Enhance PC performance

PCTuner

- Helps you improve the performance of your PC and protects your privacy by removing junk files, cookies, and Internet traces.
